## Workplace Safety Essentials

### HDPE Carboy

These UN/DOT solvent waste systems provide liquid waste collection and disposal for one or more HPLC machines. The carbon exhaust filter traps potentially harmful vapors emitted from solvents, protecting works from inhaling dangerous fumes. Designed for single-use and easy disposal of laboratory waste.

### HPLC Disposal Cans

Common solvents (acetonitrile, hexane, and methanol) are flammable liquids used in the HPLC process. To comply with EPA regulations and keep employees safe, Justrite HPLC waste cans are essential, and the only FM approved safety can for collecting and disposing of flammable liquid waste from the HPLC process.

### Safety Signage

Provide essential information to workers, visitors, and customers. Clearly identify emergency shelter areas, hazardous situations, and more. Additional sizes and materials available.

### Oily Waste Can

Immediately dispose of soiled rags after the cleaning process, as required by OSHA. The self-closing oily waste can deprives soaked rags of air to prevent spontaneous combustion.

### Flammable Safety Cabinet

Storing chemicals properly can prevent chemical hazards from your HACCP plan. Use OSHA compliant, fire-resistant safety cabinets to safely store flammable, hazardous and corrosive materials.

### Matting

Anti-fatigue matting with ergonomic features keeps workers safe and productive. Long run and workstation options available, as well as sanitizing mats to avoid cross-contamination when entering clean rooms.

### Don't forget these important safety products:

- **Safety Showers & Eyewashes** – combo units for onsite treatment of eye/face & body
- **Safety Cabinets & Storage Accessories** – storage for hazardous liquids
- **ChemCor Lined Safety Cabinets** – storage for highly corrosive acids
- **Poly Cabinets** – storage for highly corrosive acids
- **Hazmat Safety Cabinets** – safe and secure hazardous/chemical storage
- **Outdoor Safety Lockers** – outdoor safety lockers with explosion relief panels
